# EMPLOYEE RECORD OF DATABASE MANAGEMENT SYSTEM

## PROJECT WORK

**Submitted By**

**KANHAIYALAL PATEL – 205119043**

UNDER THE GUIDENCE OF

**Dr.U.Vignesh**

# Abstract

Employee Record Management System project used to manage the data of the employees such as personal details, education details, work exp etc. This project will reduce the paper work of the company . Through this project company can manage all data online.

An **Employee management system** is software useful for the human resource department that allows them to view details of any employee working in the organization or those who worked in the past. It is designed to simplify the process of record maintenance of employees in an organization.

# Menu and Submenus

**Employee Record Management System project divided in two modules :**

- User Module
- Admin Module

## User Module

- User can register himself.
- User login
- User password recovery.
- User can add / edit own work experience details
- User can add / edit own education details.
- User can edit own profile.
- User can update own password.
- Logout

## Admin Module

- Admin Login
- Admin can manage all employee records.
- Admin can update / edit user personal details/ work exp. details / Education.
- Admin can update own profile
- Change password

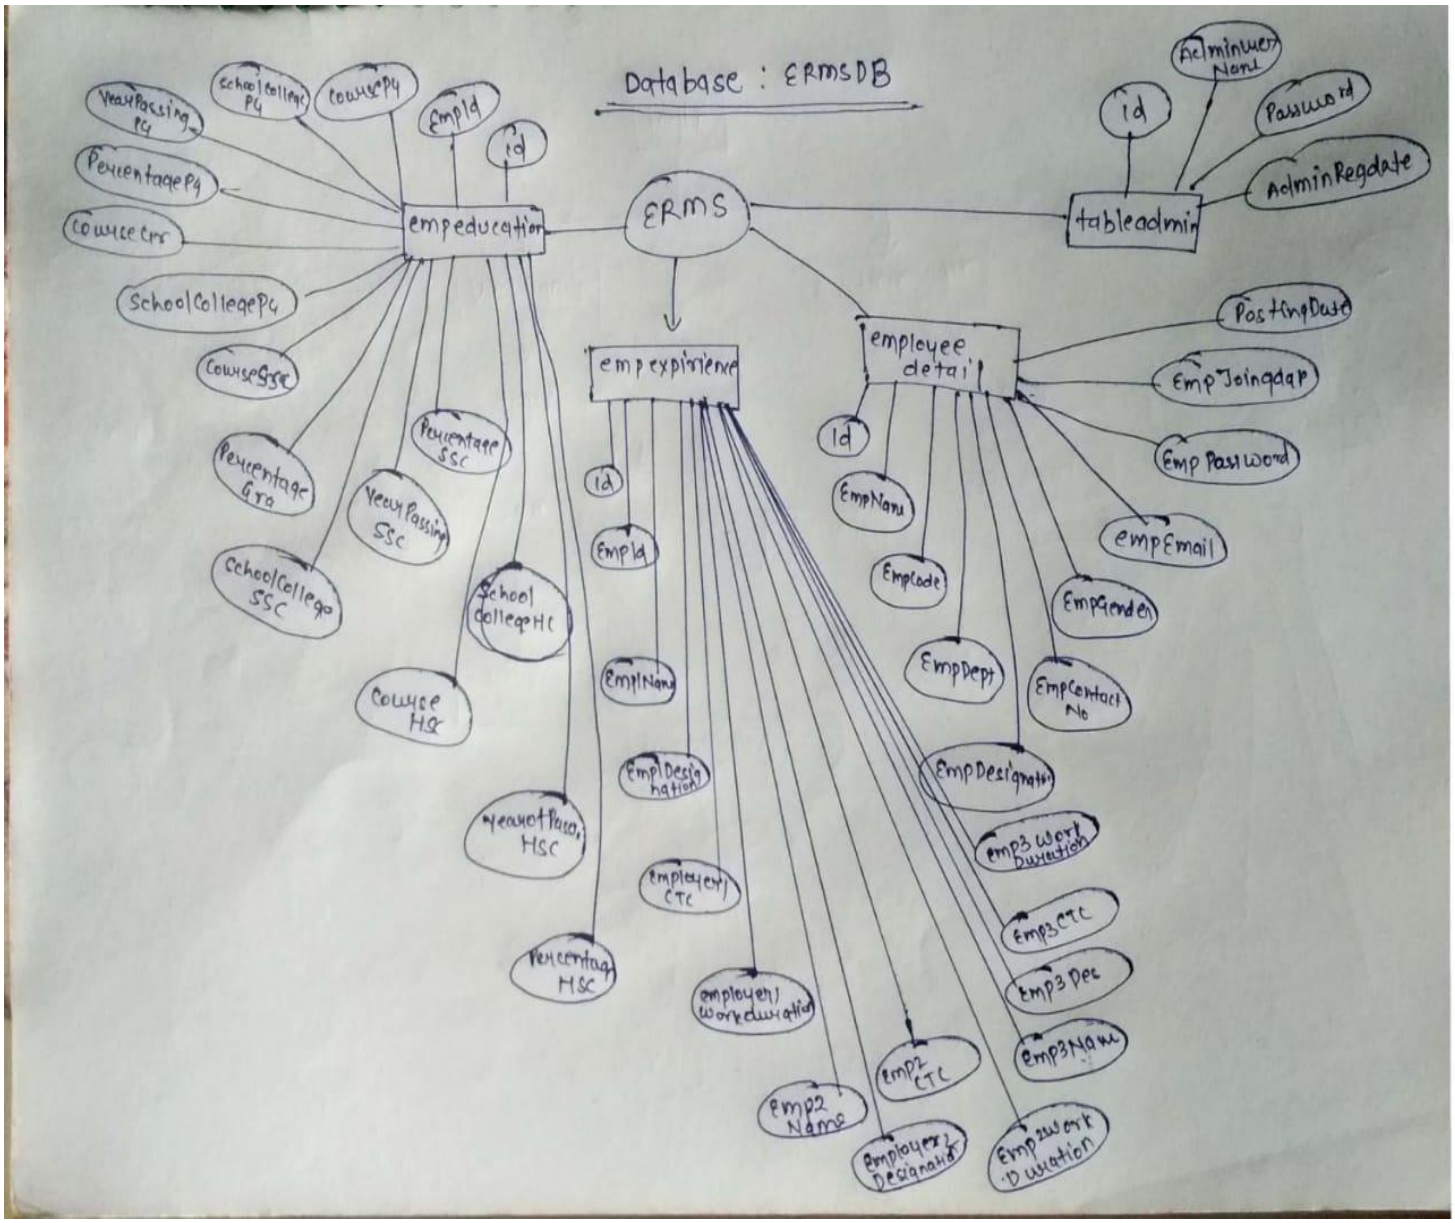
# ERMSDB-DATABASE



# SCREENSHOTS OF THE PROJECT

**BLOOD BANK MANAGEMENT SYSTEM**

# WHAT EMPLOYEE MANAGEMENT SYSTEM CAN DO?

It helps in **managing** the information of employees for HR functions. In short, one of the comprehensive parts of the **Human Resource Management System**.

## Employee Management System in PHP F**eatures**:

- ### Admin Module

  Admin can manage all employee records, edit user personal details, work exp. details, and work exp. details.

- ### Admin Login

  For admin security features it uses session.

- ### Employee Module

  This system has an employee module that can monitor attendance, manage payroll, and other HR features.

- ### Employee Management

- They Can add or edit own information such as work experience details, educational background, and the likes.

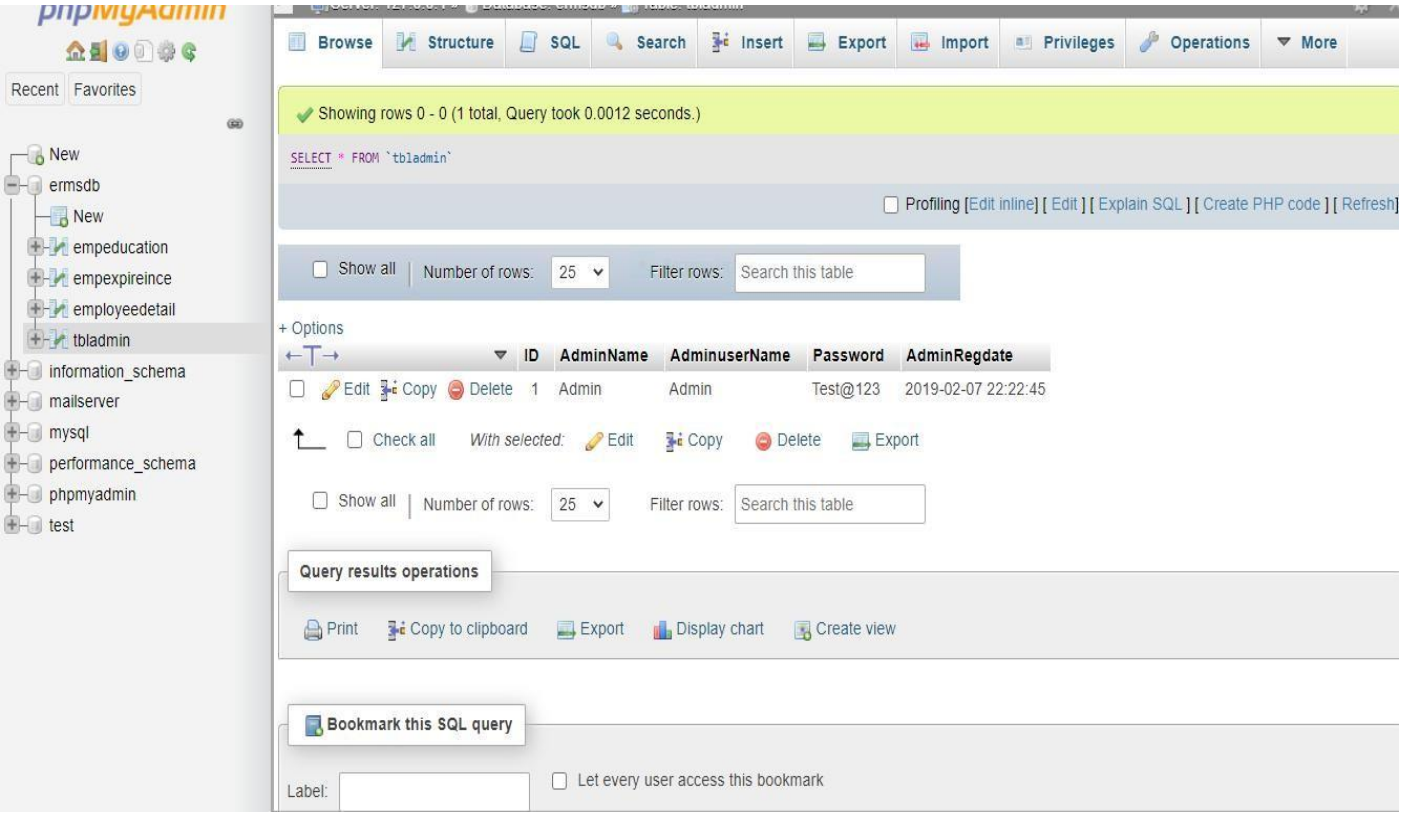
# TABLEADMIN



# DISCUSSIONS

The system was designed to solve the major problems faced in handling hard copy records of employees inclusive of space consumption time wastage which was achieved" Effective use of the system can therefore deliver. quality of handling employees

and also managing employee promotion compensation and rewards"

# RECOMMENDATION

I recommend that the administrator and the employees of the organization be introduced to the functionalities of the new system before deployment" I also recommend that the system be used for purpose it is meant for and should be used only by staff registered "The system should only be available on the intranet since it's for organizational use not a public asset" more so I recommend further study on this system and addition of new features as they emerge from the user requirements and organizational growth

# CONCLUSION

There were so many challenges faced in the existing

system that needed to be addressed and these have given rise to development of this system.

The challenges helped determine what the developed system addresses. in case of new challenges sighted with use of the new system. this calls for system upgrade or addition or more features to mitigate such problems

The employee 1ecords management system developed is a secure and userfriendly application which can be used to manage employee records effectively and efficiently

The developed system is subject to development by integration of more other special features and so it's open for more study.

The developed system is flexible and can therefore be customized for use by other organizations to manage employee records effectively.

Conclusively proper utilization of this system will help optimise resources at the organization and increase the effective flow of business since human resource management lies at the forefront of organizational growth and this is well achieved by having an efficient mechanism of managing their records.
